**REFERENCE NOTES :**

<p>PAGE 1: THE TEMPERATURE GRAPH SHOWS NORMAL MAXIMUM AND NORMAL MINIMUM DAILY TEMPERATURES (SOLID CURVES) AND THE ACTUAL DAILY HIGH AND LOW TEMPERATURES (VERTICAL BARS).</p> <p>PAGE 2 AND 3: H/C INDICATES HEATING AND COOLING DEGREE DAYS. RH INDICATES RELATIVE HUMIDITY W/O INDICATES WEATHER AND OBSTRUCTIONS S INDICATES SUNSHINE. PR INDICATES PRESSURE. CLOUDINESS ON PAGE 3 IS THE SUM OF THE CEILOMETER AND SATELLITE DATA NOT TO EXCEED EIGHT EIGHTHS(OKTAS).</p> <p>GENERAL: T INDICATES TRACE PRECIPITATION, AN AMOUNT GREATER THAN ZERO BUT LESS THAN THE LOWEST REPORTABLE VALUE. + INDICATES THE VALUE ALSO OCCURS ON EARLIER DATES. BLANK ENTRIES DENOTE MISSING OR UNREPORTED DATA. NORMALS ARE 30-YEAR AVERAGES (1971 - 2000). ASOS INDICATES AUTOMATED SURFACE OBSERVING SYSTEM. PM INDICATES THE LAST DAY OF THE PREVIOUS MONTH. POR (PERIOD OF RECORD) BEGINS WITH THE JANUARY DATA MONTH AND IS THE NUMBER OF YEARS USED TO COMPUTE THE MEAN. INDIVIDUAL MONTHS WITHIN THE POR MAY BE MISSING. WHEN THE POR FOR A NORMAL IS LESS THAN 30 YEARS, THE NORMAL IS PROVISIONAL AND IS BASED ON THE NUMBER OF YEARS INDICATED. 0.* OR * INDICATES THE VALUE OR MEAN-DAYS-WITH IS BETWEEN 0.00 AND 0.05. CLOUDINESS FOR ASOS STATIONS DIFFERS FROM THE NON-ASOS OBSERVATION TAKEN BY A HUMAN OBSERVER. ASOS STATION CLOUDINESS IS BASED ON TIME-AVERAGED CEILOMETER DATA FOR CLOUDS AT OR BELOW 12,000 FEET AND ON SATELLITE DATA FOR CLOUDS ABOVE 12,000 FEET. THE NUMBER OF DAYS WITH CLEAR, PARTLY CLOUDY, AND CLOUDY CONDITIONS FOR ASOS STATIONS IS THE SUM OF THE CEILOMETER AND SATELLITE DATA FOR THE SUNRISE TO SUNSET PERIOD. CLEAR INDICATES 0 - 2 OKTAS, PARTLY CLOUDY INDICATES 3 - 6 OKTAS, AND CLOUDY INDICATES 7 OR 8 OKTAS. WHEN AT LEAST ONE OF THE ELEMENTS (CEILOMETER OR SATELLITE) IS MISSING, THE DAILY CLOUDINESS IS NOT COMPUTED.</p>	<p>GENERAL CONTINUED: WIND DIRECTION IS RECORDED IN TENS OF DEGREES (2 DIGITS) CLOCKWISE FROM TRUE NORTH. "00" INDICATES CALM. "36" INDICATES TRUE NORTH. RESULTANT WIND IS THE VECTOR AVERAGE OF THE SPEED AND DIRECTION. AVERAGE TEMPERATURE IS THE SUM OF THE MEAN DAILY MAXIMUM AND MINIMUM TEMPERATURE DIVIDED BY 2. SNOWFALL DATA COMPRISE ALL FORMS OF FROZEN PRECIPITATION, INCLUDING HAIL. A HEATING (COOLING) DEGREE DAY IS THE DIFFERENCE BETWEEN THE AVERAGE DAILY TEMPERATURE AND 65 F. DRY BULB IS THE TEMPERATURE OF THE AMBIENT AIR. DEW POINT IS THE TEMPERATURE TO WHICH THE AIR MUST BE COOLED TO ACHIEVE 100 PERCENT RELATIVE HUMIDITY. WET BULB IS THE TEMPERATURE THE AIR WOULD HAVE IF THE MOISTURE CONTENT WAS INCREASED TO 100 PERCENT RELATIVE HUMIDITY. ON JULY 1, 1996, THE NATIONAL WEATHER SERVICE BEGAN USING THE "METAR" OBSERVATION CODE THAT WAS ALREADY EMPLOYED BY MOST OTHER NATIONS OF THE WORLD. THE MOST NOTICEABLE DIFFERENCE IN THIS ANNUAL PUBLICATION WILL BE THE CHANGE IN UNITS FROM TENTHS TO EIGHTS(OKTAS) FOR REPORTING THE AMOUNT OF SKY COVER. STATION HISTORY STOPPED WITH THE 2009 ANNUAL. IF YOU NEED HISTORY GO TO "MULTI-NETWORK MEDADATA SYSTEM", URL IS: <a href="https://mi3.ncdc.noaa.gov/mi3qry/login.cfm">https://mi3.ncdc.noaa.gov/mi3qry/login.cfm</a> SNOWFALL STOPPED MONTH &amp; YEAR INDICATED ABOVE. NO FURTHER YEARS INCLUDED UNLESS RESTARTED.</p> <p><b>NOTE:</b> The "Period of Record:(POR) for all "averages" is based on the "Summary of the Day First Order Station" and "Cooperative Summary of the Day" archives.</p>

# 2010 SAN FRANCISCO DOWNTOWN CALIFORNIA (SFOC)

San Francisco is located at the northern end of a narrow peninsula which separates San Francisco Bay from the Pacific Ocean. It is known as the air conditioned city with cool pleasant summers and mild winters. Flowers bloom throughout the year and warm clothing may be needed at times during any month.

Precipitation averages about 20 inches a year with pronounced wet and dry seasons, characteristic of its Mediterranean climate. Little or no rain falls from June through September while about 80 percent of the annual total falls from November through March. Snow is extremely rare. Measurable amounts fall about once every 15 years. Freezing temperatures are also extremely rare. On average, thunderstorms occur on only two days each year. The average annual wind speed is about 9 mph with lighter winds, 6 to 7 mph, occurring in the winter and stronger winds, 10 to 11 mph, in the summer.

San Francisco probably has greater climatic variability by far with respect to temperature, cloudiness, and sunshine within its 49 square mile area than any other similarly sized urban area in the country. Likewise, the San Francisco Bay area has considerably more variability than San Francisco itself.

Sea fogs, and the low stratus clouds associated with them are most common in the summertime, but may occur at any time of the year. In the summer the temperature of the Pacific Ocean is much lower than the temperature inland, particularly in the Central Valley of California. This condition tends to enhance the sea breeze effect common to coastal areas. Brisk westerly winds blow throughout the afternoon and evening hours. The fog is carried inland by these westerly winds in the late afternoon and evening and then evaporates during the subsequent forenoon.

The complex topography of San Francisco causes complex patterns of fog and sun as well as temperature. A range of hills with elevations of nearly 1000 feet above sea level, bisects the city from north to south. This range partially blocks the inland movement of the fog, but gaps in the hills permit small masses of fog to pass through, further complicating the pattern. Occasionally, the fog will reach 50 miles south to San Jose, while the area just to the lee of the highest hills is still mostly clear.

Sunshine varies greatly from one part of the city to another, especially in the summer. Spring and fall are the sunniest seasons. In the summer the sunniest area is a triangular shaped area to the lee of the highest hills and extending to the bay. The least sunny area is along the ocean due to the high frequency of fog there. The percent of possible summer sunshine varies from an estimated 25 to 35 percent at the ocean to 70 to 80 percent in the sunniest area.

The extent and behavior of the summertime fog on a particular day depends on several factors. A typical day would find the fog covering the entire city at sunrise and little wind. During the forenoon the skies become sunny in the eastern part of the city with some partial clearing reaching the ocean for a couple of hours in the early afternoon. By early afternoon the winds pick up and by late afternoon the fog is rolling inland again. The wind usually reaches a maximum velocity in the early evening.

In the winter relatively little difference in the climate is observed from one part of the city to another. This is due to the lack of temperature contrast between the ocean and the land and to the relative frequency of passage of Pacific frontal systems. However, those areas near the ocean have more sunshine than areas further inland. The source region for fog is inland during winter, mainly in the Central Valley, rather than the ocean.

Temperature patterns in the city are the same as those of sunshine. In the winter there is little variation, with average maximums from 55 to 60 degrees and average minimums in the mid to upper 40s. Average temperatures rise until June and remain nearly constant through August with average maximums in the lower 60s near the ocean and upper 60s in the sunny eastern half of the city. Summer minimums range from 50 to 55. The warmest time of the year is September and October when the fog diminishes greatly and some of the warmth from the Central Valley flows westward. At this time of year the average maximums are in the mid 60s near the ocean and in the mid 70s in the warmest areas of the city. The average minimums are about the same as they are during the summer.
