

# **THE PLANETARY DATA SYSTEM AND “PDS CHALLENGE”**

Ed Grayzeck/Todd King

February 4, 2016

# NASA's Tournament Lab (NTL)

Facilitates the use of crowdsourcing to tackle NASA challenges.

Seeks novel ideas or solutions to accelerate research and development efforts, improve algorithm performance, and seek new ideas and approaches in support of the NASA.

- Very agile
- Best for
  - Conceptualizing
  - Design
  - Prototyping (Proof of concept)

# Past NTL interactions

- “PDS Challenge” status as of 2016
  - NASA Tournament Lab(NASA/Harvard/TopCoder) teamed with PSD to implement as NTL action
  - Contests initially supported by NTL via NASA HEOMD (then CoECI) and through SMD
  - Used a restricted sample of SBN (comet Halley) -start 2012 and presented at Oct 2012 DPS
  - Poster at Oct 2013 DPS including step to form Cassini-Rings (C-R)Challenge – workshop/posters
  - Planetary Data Storyboard abstract at Dec 2015 AGU in NASA SMD special education session
  - New Task system from CoECI with SMD support for C-R Next Steps

# Challenge Cassini - Rings

- 1. NTL Teams to search Cassini ISS data for disruptions – step 1 contests completed.
- 2. Step 2 Marathon Match (761 “controls”)
- 3. Evaluation by Rings (30K images) identifies needed improvements in efficiency of algorithm
- 4. Work through CoECI multi-phase task order contract with SMD funds
- 5. Control search leads to promising results but needs robust verification
- 6. Outline steps to complete phase 1 with improvements and documentation

# PPI CHALLENGE AND STORYBOOK UPDATE

Todd King, Ed Grayzeck

# Storyboard

## PPI's First NTL Challenge

### History

- Concept proposed (11/14)
- SMD funding for proof-of-concept (5/15)
- Completed (11/15) - <http://52.3.187.118:3000/>

### Key features

- Based on Myyna (a Pinterest clone)
- Pin web item (pages, pictures, etc.)
- Node.js application.
- Key drawbacks
- Time line view based on time item pinned.
- Pinned items can be easily disorganized

"Time is the longest distance between two places."

A screenshot of a web browser showing the PDS (Planetary Data System) profile for the MAVEN mission. The page features a header with the PDS logo and a search bar. Below the header, there is a large image of the MAVEN spacecraft's orbit around Mars. To the right of the image, the name "MAVEN" is displayed in large letters, followed by the text "Discoveries from NASA's MAVEN mission". A profile picture of a man wearing a cap and sunglasses is shown, with the name "Todd" underneath it. Below the name, there are icons for "1" person and "1" like.

A screenshot of a social media-style post from the PDS timeline. The post is by "Todd" and is dated "2 months ago". The text of the post reads: "The in-situ calibrated level 2 science data bundle contains selected fully calibrated (L2) data from the Particles and". To the right of the text is a "Pin it" button. Below the text is a thumbnail image of a PDS website page titled "PDS: PLANETARY PLASMA INTERACTIONS". The website page shows a navigation menu with options like "HOME", "OVERVIEW", "DATA", "DOCUMENTS", "SOFTWARE", "PERSONNEL", "RELATED SITES", and "ABOUT PDS". There is also a search bar and a "QUICK SEARCH" section. The post has a date of "7/16/2015" and "0" likes.

Pinned Item

A screenshot of another social media-style post from the PDS timeline. The post is by "Todd" and is dated "2 months ago". The text of the post reads: "The Magnetometer on the MAVEN spacecraft was first activated just after launch." To the right of the text is a "Pin it" button. Below the text is a thumbnail image of a PDS website page titled "PDS: PLANETARY PLASMA INTERACTIONS". The website page shows a navigation menu with options like "HOME", "OVERVIEW", "DATA", "DOCUMENTS", "SOFTWARE", "PERSONNEL", "RELATED SITES", and "ABOUT PDS". There is also a search bar and a "QUICK SEARCH" section. The post has a date of "7/16/2015" and "0" likes.

# We Found That...

Using the NTL and the challenge approach is great for

- Tapping into a network of professionals and experts.

And to do:

- Conceptual Design
- User Interface Design
- Proof-of-concept or prototype development.
  
- It's very agile
  - small sections with multiple implementations, reviewed and best implementation is selected.

# Storyboard – Next Steps

- The first version of software is a valuable learning experience.
- Re-implementing can result in a more refined application.

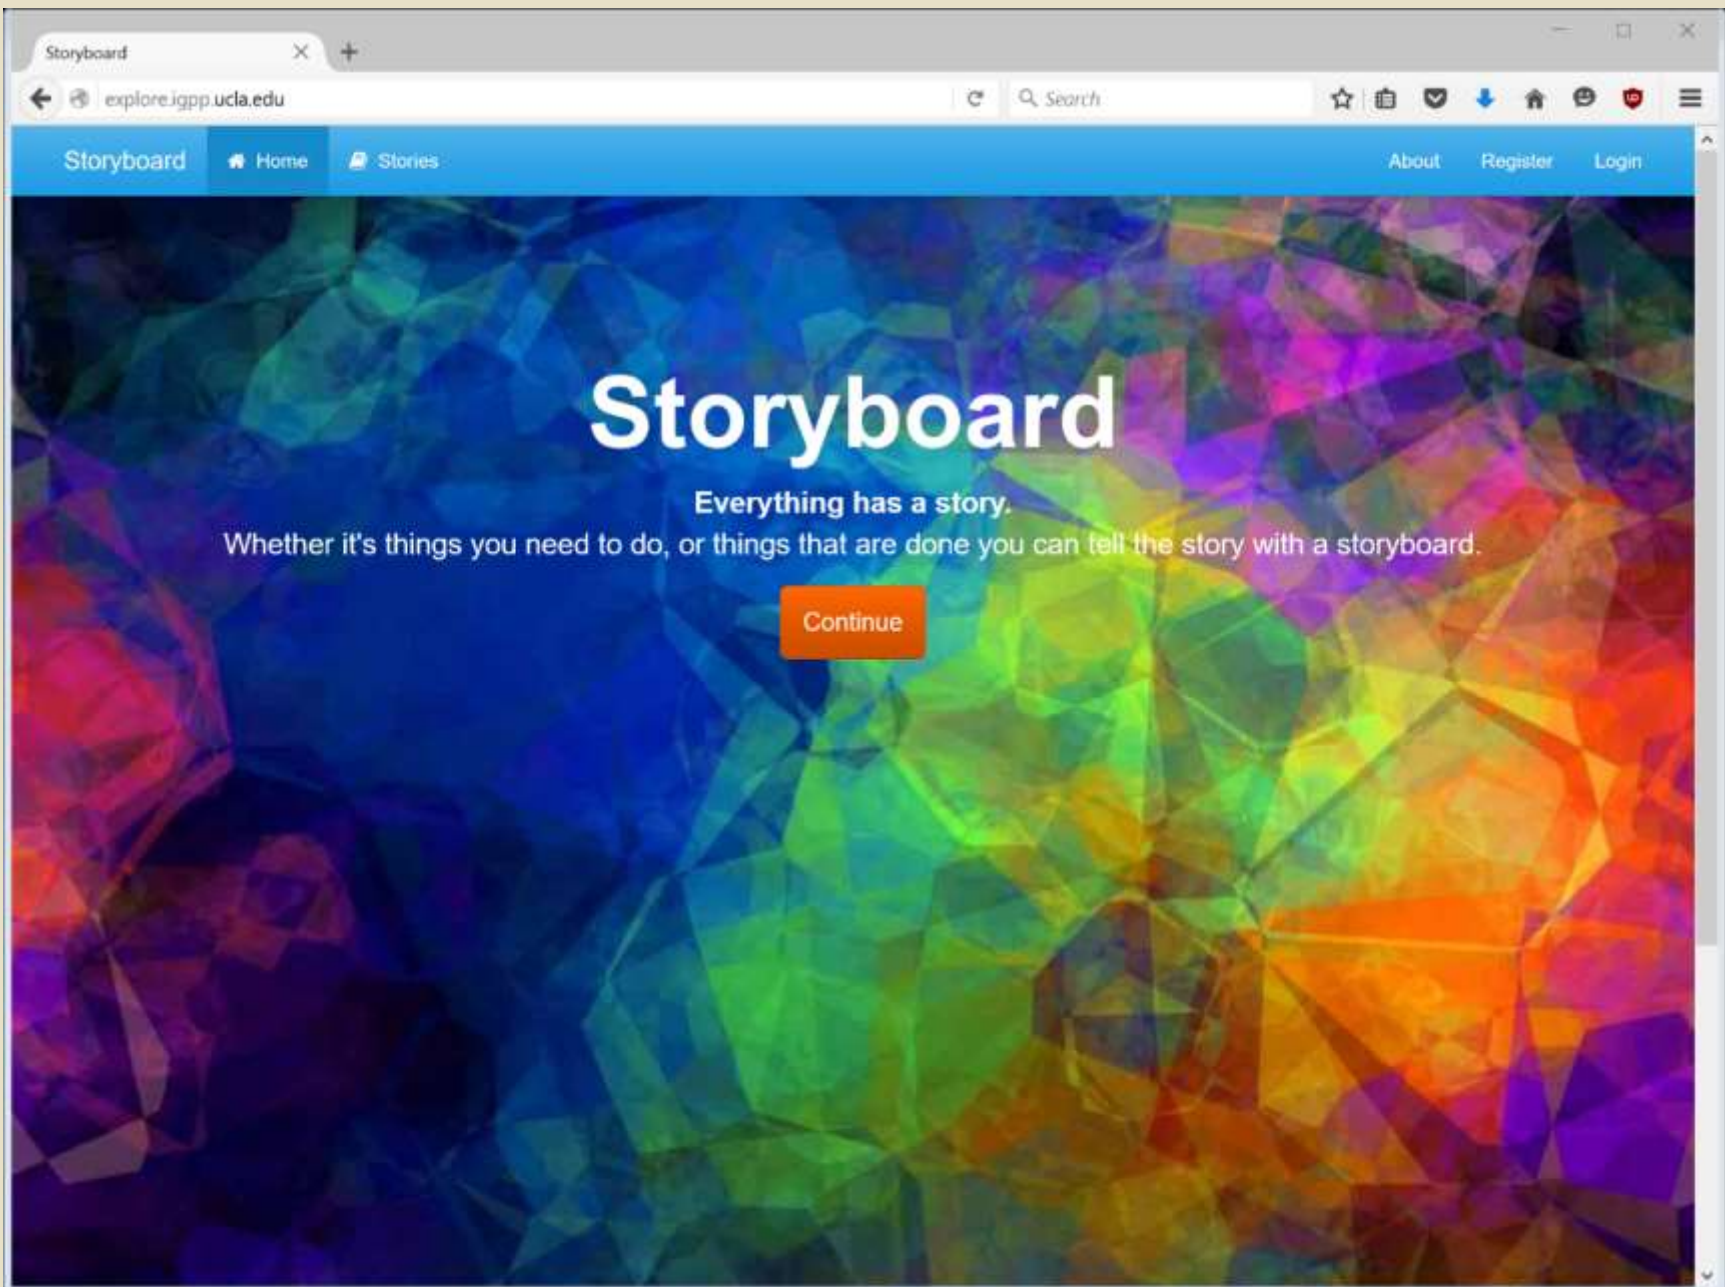

This is what we chose to do for the Storyboard.

# Storyboard - Revision

- Pared down and simplified design.
- Development started two weeks ago
  - completed first phase

## Key Features

- Meteor application (node.js)
- Uses application specification approach (meteor-kitchen)
- Two sided timeline
- Public and private viewing.

# Storyboard

Everything has a story.

Whether it's things you need to do, or things that are done you can tell the story with a storyboard.

# Journey to Jupiter

A quick journey to Jupiter.

## Step One

Find Jupiter in the Solar System.

## Step Three

## Step Two

Launch a spaceship in the right direction.

# Planned Features

- Login using Oauth (Google, Facebook, Github, LinkedIn)
- Step-by-step feature (education mode)
- Image upload (and web page snapshot)
- Visual editing of cards and timelines
- Search feature
- Featured and most popular on home page
- User dashboard (views, likes, shares)
- Like and share
- Team editing
- Server deployment

# PPI Challenge – Our Goals

## Innovate

“The trick to innovating is not coming up with something brand new, but connecting things we've never connected before, pairing different technology together.”

(Sean James, Microsoft)

PDS has an infrastructure – let's use it!

# PPI Challenge – Selecting a topic

## **Selecting a challenge has been challenging.**

- Visualization of data  
Our in-house development has matured quickly. No need for a challenge.
- PDS4 support in Python  
An hour after selecting this we got the e-mail from Mike A'Hearn announcing the SBN effort. No need to duplicate.
- Selecting an item from Anne's list.  
But we will be funding the challenge with PPI sources and need to meet a direct PPI need.
